

TransferMate

Batching Multiple Payments

If your company makes multiple international payments on a regular basis, TransferMate can save you time and money using our batch transfers.

Out with the old

Normally using your bank to make multiple payments you incur high transfer fees on your end, on the receiver end, poor exchange rates and little customer service not to mention the time taken to actually process multiple payments.

In with the New

Using TransferMate you simply send us a list of all of the payments you need to make in a database i.e excel/word and we will let you know the sum total you need to pay in one transaction in your local currency.
